EDUCATION

University of California, Los Angeles

Master of Science in Computer Science

Los Angeles, CA

September 2026 – June 2027

University of California, Los Angeles

Bachelor of Science in Computer Science (GPA: 3.8)

Los Angeles, CA

September 2022 – June 2026

Coursework: Distributed Systems, Deep Learning, Database Systems, Computer Vision, Computer Architecture, Computer Networking, Algorithms, Operating Systems, Programming Languages, Data Science, Computer Organization

Honors/Awards: Dean's Honors List (Fall 2022, Winter 2023, Spring 2023, Spring 2025)

Activities: Road to Damascus A Cappella (Music Director), Grace on Campus (Web Dev Team, Music Team)

EXPERIENCE

Software Engineer Intern

MongoDB

Jun. 2026 – Aug. 2026

Palo Alto, CA

- Worked on the Cluster-to-Cluster team building disaster recovery and scaling large distributed systems, boosting maximum sustained throughput 3.5x, reducing object store + network costs by 75-95% and improving wire efficiency by 300%.
- Designed, iterated on, and implemented a four-part performance upgrade project consisting of per-object amortization, concurrent pipelining, parallel uploads, and object de/compression in Go.
- Planned and executed a 20+ run benchmarking experiment in K8s environments and recorded metrics through an observability pipeline consisting of Prometheus, Grafana, and Loki to answer engineering questions about the project's impact.

Software Engineer Intern

Stealth AI Startup

Jun. 2025 – Dec. 2025

Remote

- Prototyped a full-stack learning platform featuring interactive skill trees, lesson progression, and agentic AI integration using a Next.js + TypeScript frontend and a Node.js + Express.js backend with a PostgreSQL + MongoDB dual database architecture.
- Built a Claude integrated chatbot using Anthropic API with lesson-context awareness and a rate-limiting subscription system.
- Worked on deploying a development environment to facilitate continued development and testing using Cloudflare + Supabase with a migration to a serverless backend architecture.
- Implemented a user authentication and progress tracking system using Supabase Auth and real-time PostgreSQL updates.

Software Engineer Intern

Anytime AI

Jun. 2024 – Sep. 2024

Remote

- Maintained Anytime's AI legal assistant's currency with recent case law by developing and optimizing Python pipelines to crawl 200+ court case summaries from multiple states using aiohttp, requests, and BeautifulSoup.
- Extracted and converted text from 500+ court PDF documents to structured JSON files with metadata, page text, and footnotes using PyMuPDF/fitz, improving data accessibility and downstream training efficiency.
- Contributed to the training of Anytime's AI legal assistant by streamlining data acquisition through automated data collection from static and dynamic court web pages.

PROJECTS

Predicting Keystrokes | Python, PyTorch, CUDA

Feb. 2025 – Mar. 2025

- Improved keystroke classification accuracy for Meta's [emg2qwerty](#) dataset, achieving a 5% lower character error rate than the baseline model by developing and training a baseline + LSTM model with PyTorch and CUDA.
- Experimented with various hyperparameters, training 6 models of varying architectures for 10+ hours over 300+ epochs.

Windborne Balloon Tracker | Python, FastAPI, Redis, React.js, Leaflet.js

Mar. 2025

- Built and [deployed](#) a full-stack tracking and visualization system that processes position and wind data for 40 WindBorne Systems global sounding balloons by integrating a FastAPI + Redis backend with a React frontend.
- Optimized API performance through strategic data caching and batching by implementing asynchronous HTTP requests with Redis caching and hourly background data refreshes.

TECHNICAL SKILLS

Languages: Python, Go, C++, C, R, Java, Javascript; *SQL (beginner)*

Technical Skills: Git, Bash (Linux), NumPy, PyTorch, Graphite, Supabase/PostgreSQL, MongoDB, Node.js, Docker, Kubernetes

Conceptual Skills: distributed systems, data structures/algorithms, web development, deep learning & neural networks
